

Innovations

Knowledge is not enough. It has to be applied.
(Johann Wolfgang von Goethe)

DEGERenergie
Tracking Systems

Do not go where the path leads you. Go where no paths exist and leave your tracks behind.
(Ralph Waldo Emerson)

DEGERenergie GmbH is an international, future-oriented company established in 1999 by Artur Deger. Its entrepreneurial activities focus on the design, development and production of tracking systems for photovoltaic modules used in solar technology. The successful development of this company began when its own patented designs won the Inventor's Prize awarded by the State of Baden-Württemberg in 2001. In the interim, DEGERenergie GmbH has become the market leader in its industry.

Visions

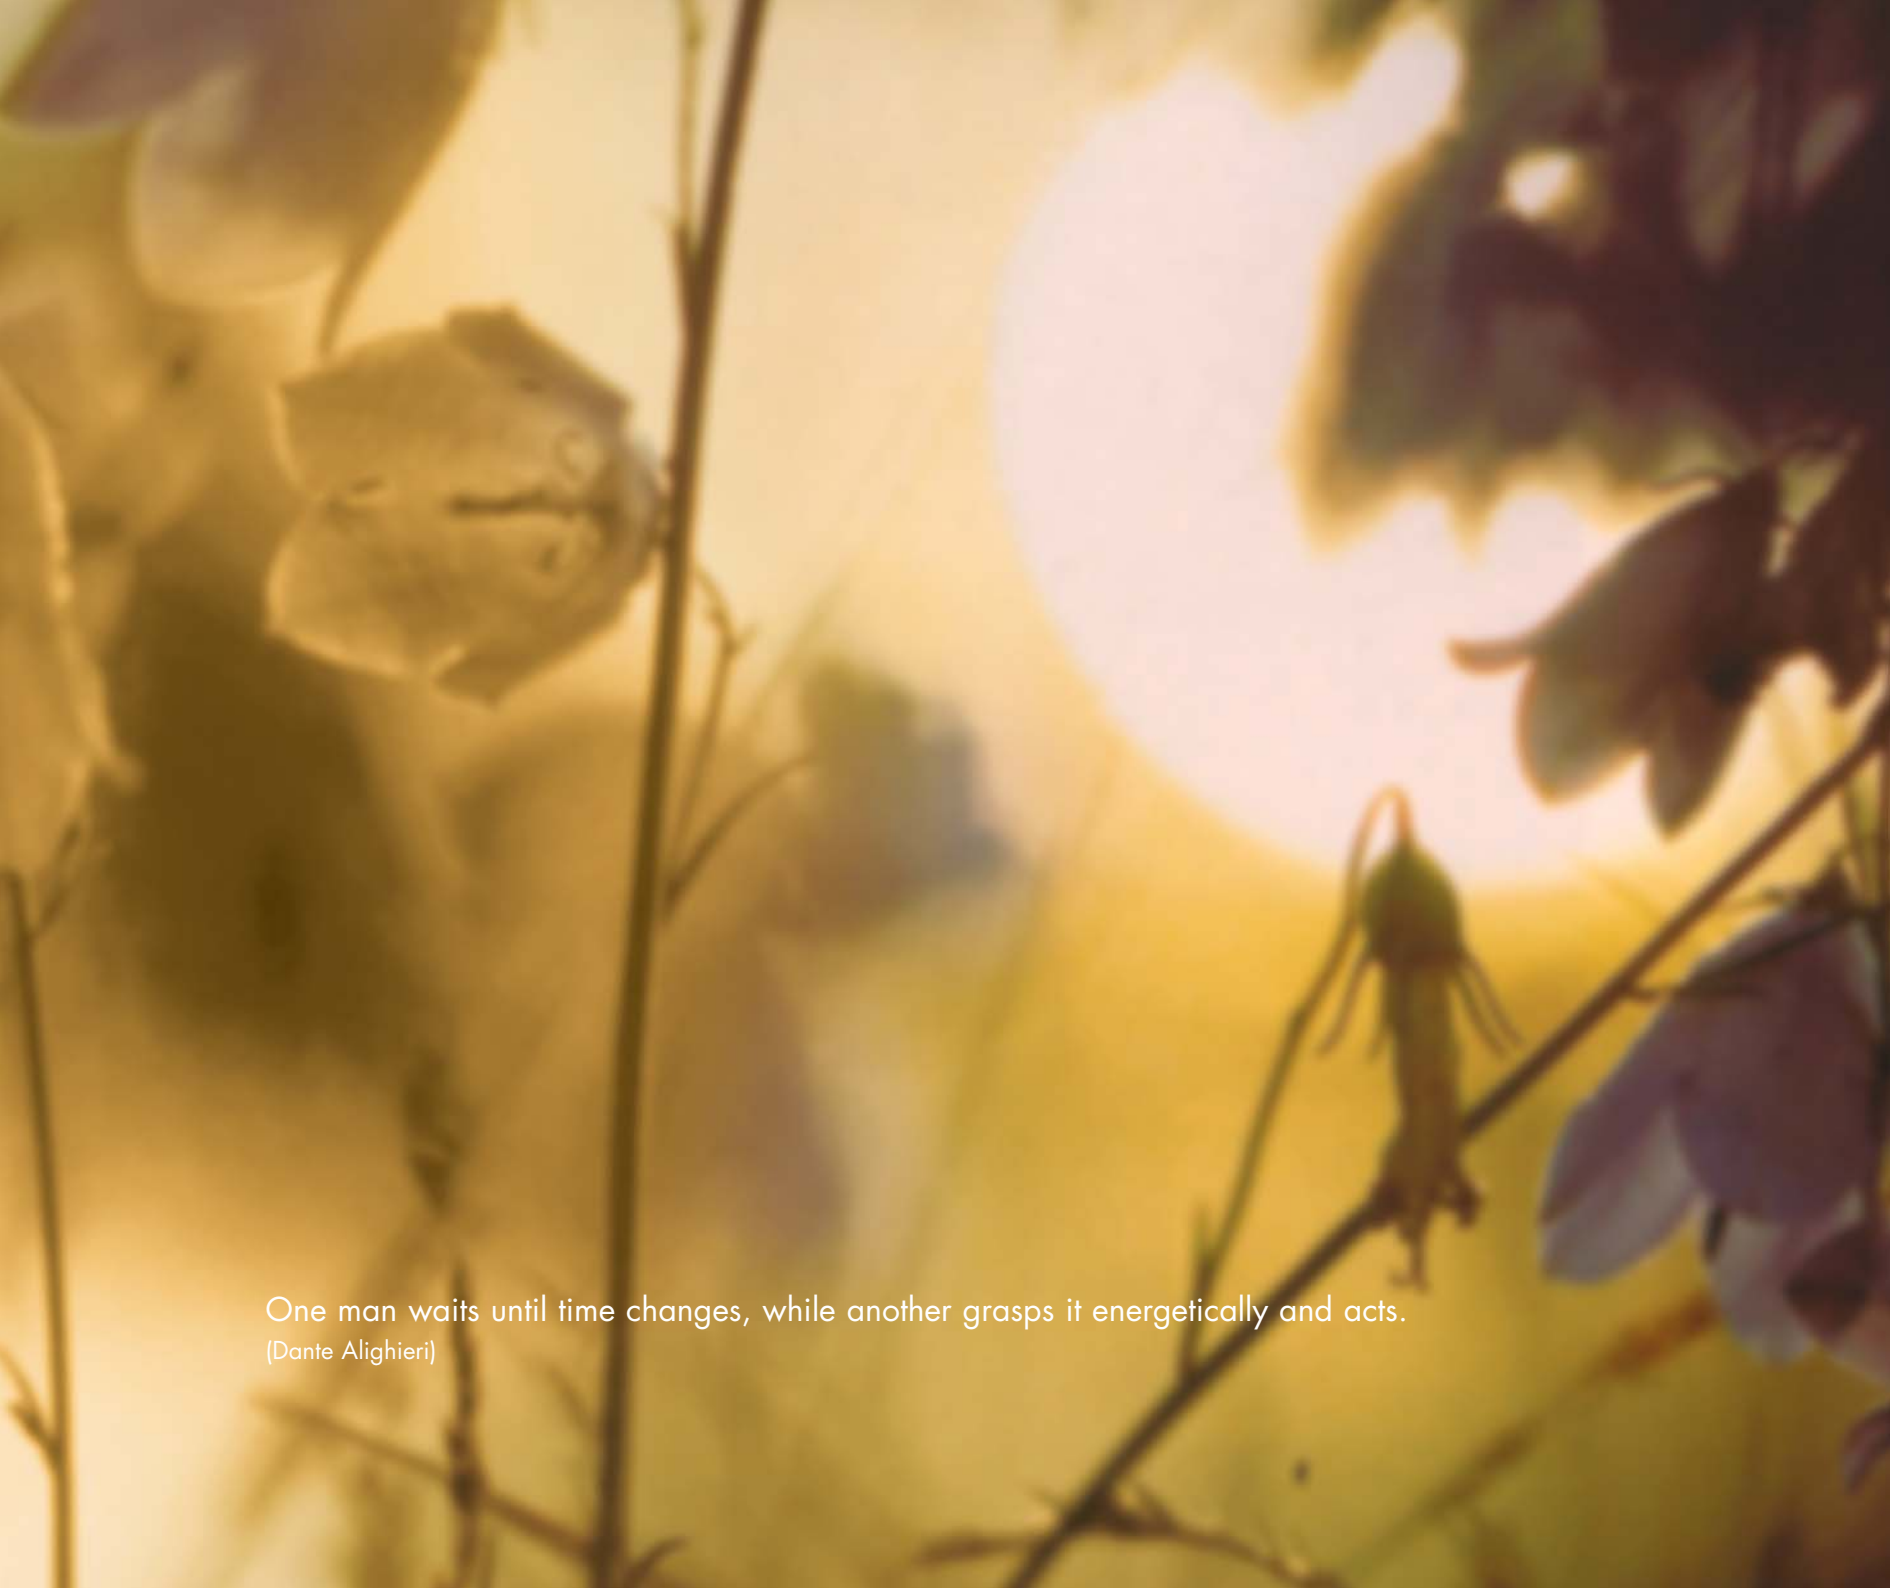

Perspectives

Intelligent Tracking Systems

... a system of cutting-edge technology for maximum utilization of solar energy. A gigantic potential for achieving economic efficiencies and maximal increases in profits.

A close-up photograph of a plant with purple flowers and green buds against a bright, hazy background. The image is dominated by a large, bright, circular light source, possibly the sun or moon, which creates a strong lens flare and illuminates the scene. The foreground shows several thin, dark stems and leaves. On the left, there are large, light-colored, somewhat translucent leaves. On the right, there are several purple flowers in various stages of bloom, some fully open and some as green buds. The overall color palette is warm, with yellows, oranges, and purples. The background is a soft, out-of-focus landscape with rolling hills or mountains under a bright sky.

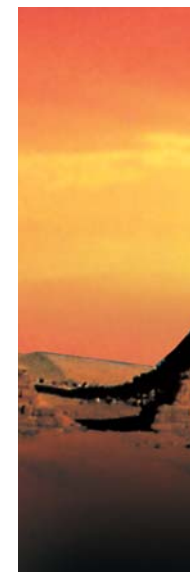

One man waits until time changes, while another grasps it energetically and acts.
(Dante Alighieri)

The secret of success
is the constancy of the goal.

(Benjamin Disraeli)

Awarded the Baden-Württemberg Inventor's Prize in 2001, our patented DEGERconecter control system continually aligns solar systems to the brightest point in the sky, thus insuring maximum energy generation. Compared to traditional, static solar systems, our tracking system technology assures superiorities in efficiency and in generating significant increases in profits. DEGERenergie Photovoltaic Systems have been recognized for optimising energy production and therefore in creating added value.

Impulses

The sun has played a central role in all world cultures since the beginning of mankind. It brings light, warmth and an inexhaustible potential of environmentally compatible energy to man and nature.

We provide nature's resources with the latest solar technology for generating energy with high-tech tracking systems that convert sunshine into value-added energy, day in and day out.

DEGERtraker

**Dual axle active tracking systems
for profit increases of 35 to 45%**

DEGER TOPtraker®

**Single axle active tracking systems
for profit increases of 20 to 30%**

LIGHT TRACKING SYSTEMS

DEGERtraker for unobstructed areas and for buildings; for assemblies utilizing various mast lengths. Normally, PV-systems achieve rated outputs only for a limited time, even during cloudless sunshine. Primarily, this is caused by the vertical portion of incoming light rays which generates the photovoltaic effect. Therefore, tracking systems were developed in order to extend the interval during which the sun can shine vertically upon the photo-cells.

Dual axle DEGERtraker tracking systems function according to the ingenious principle of the sunflower. The uniqueness of our system is based upon its patented DEGERconector control system which incorporates an integrated energy converter that aligns the module to the brightest point in the sky. Consequently, this produces an enormous increase in output.

TOPtraker for flat roofs and unobstructed areas.

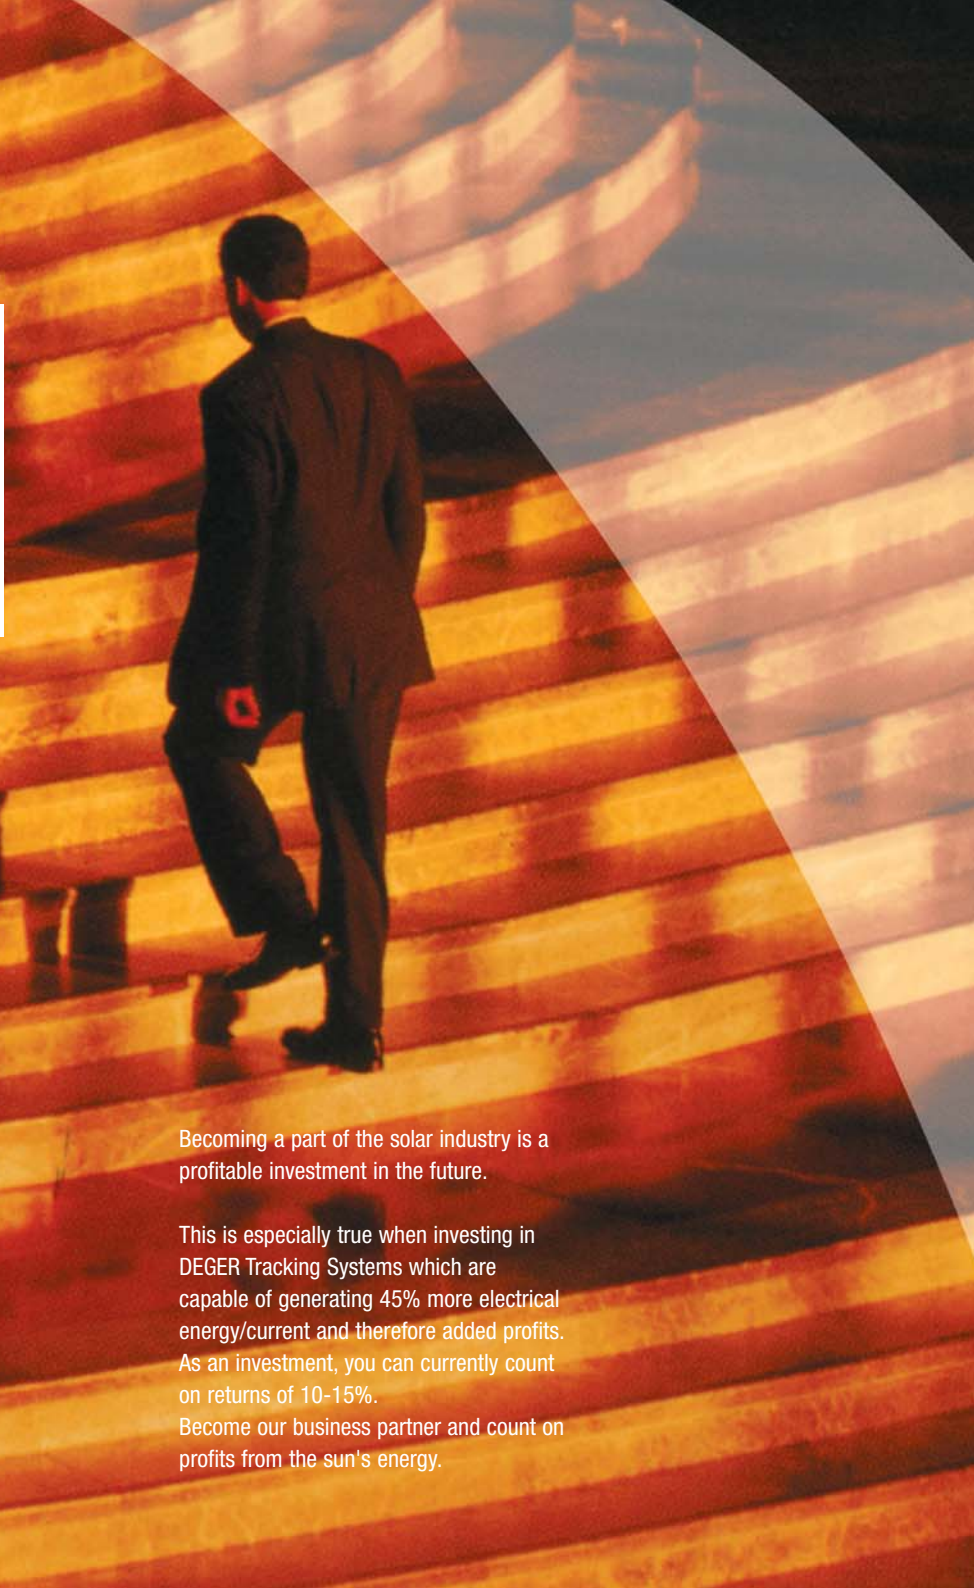

TOPtraker - our single axle tracking system – supports solar modules with surfaces up to 8,5 qm. Although designed for flat roof installation, it can also be used on the ground.

Dimensions

New continents can never be discovered unless courage exists to leave all coastlines behind.
(André Gide)

Efficiency

Opportunities multiply if they are seized.

(Sun Tzu)

Becoming a part of the solar industry is a profitable investment in the future.

This is especially true when investing in DEGER Tracking Systems which are capable of generating 45% more electrical energy/current and therefore added profits. As an investment, you can currently count on returns of 10-15%.

Become our business partner and count on profits from the sun's energy.

Innovative system design
for optimum use of solar energy

future-oriented - efficient - high yield
